

<https://www.latlong.net/category/cities-102-15.html>

The above-given dataset will be used to get the info of the latitudes and longitudes of the city the personalities are coming to stay. The above-given data is specific to India as I am making the basic models with concern to the Indian nation

<https://api.foursquare.com/v2/venues/explore>

Will also be using the foursquare API to explore the location of the city. The city will then be clustered on the basis of the data points of the restaurants nearby.

The clusters will then be used to find the maximum data points(restaurants) contained in them. This way using the data set from latlong and the foursquare API we will be able to predict the right cluster for the personalities and also provide with the list of hotels in that cluster area.
